Letter Grade	Grade Points	Description	Range of Marks(%)
O	10	Outstanding	90-100
A+	9	Excellent	80-89
A	8	Very Good	70-79

P	4	Pass	35-39
F	0	Fail	0-34
Ab	0	Absent	Absent

15.6 In cases statutory bodies of the programme issue the guidelines regarding the minimum passing percentage of marks, then grading will be done in the following manner:

If the marks obtained by the student in a course are less than the minimum cut-off percentage of marks, then F grade will be awarded otherwise, the grades will be awarded as per above- mentioned table.

15.7 If a student obtains F or Ab grade in any course(s), he/she will be treated as having failed in the course(s). He/She has to reappear in the examinations of that course(s) as and when conducted by the University. Marks obtained earlier in continuous assessment may be carried forward and added to the marks obtained in repeat semester-end examination to decide the grade in the repeat course(s).

15.8 The student will be promoted to the next semester if he/she secures at least half of the total credits in a semester. In case the student secures less than half of the total credits in any semester, then the student will be declared fail in that semester and he/she will be asked to repeat the entire semester and that semester will be treated as zero semester. In such cases the student will not be promoted to the next semester.

If a student passes in all the courses offered in any semester, then the student will be declared pass in that semester. If a student secures at least half of the total credits in a semester and fails in some courses offered in that semester then he/she will be provisionally promoted to the next semester with ATKT (Allowed to keep terms) in those courses in which he/she fails.

If the student fails to pass all the courses in the next ATKT examination, the provisional promotion will be terminated but he/she will be given second chance to pass the failed courses. Suppose the student does not successfully complete the concerned semester even after the aforesaid second chance in that case, she/he shall be treated as fail in that semester and will be asked to repeat the entire semester and that semester will be treated as zero semester.

15.9 Repetition of a theory/practical course is allowed only to those candidates who get F or Ab grade in the course or has failed in the semester. The student has to pay the prescribed fee for repeating the course.

15.10 On account of valid reasons, a student may withdraw from a semester. In such case, that semester will be treated as zero semester.

The guidelines of the University/SWAYAM portal/UGC shall be followed for evaluation and certification of MOOCs Vocational courses, Field-Projects Internship/Apprenticeship/Community engagement and service/Research Project.

17. Calculation of SGPA/CGPA:

17.1 Semester Grade Point Average (SGPA) is a measure of performance of the student in a semester. It is the ratio of total credit points secured by a student in various courses registered in that semester and the total course credits taken during that semester, i.e.

$$SGPA (S_i) = \frac{(C_1G_1 + C_2G_2 + C_3G_3 + \dots)}{C_1 + C_2 + C_3 + \dots}$$

Where S_i is the i^{th} year, C_i is the number of credits of the i^{th} course in the semester (S_i) and G_i is the grade point scored by the student in the i^{th} course.

17.2 The Semester Grade Point Average (SGPA) and Cumulative Grade Point Average (CGPA) will be calculated as weighted average of credits points secured by the student, except the credits of additional courses if any. The SGPA and CGPA shall be rounded off up to 2 decimal places and reported in the grade sheet

Calculation of SGPA

Course	Credits(C)	Grade	Grade Point (GP)	Credit Points (C*GP)	SGPA (Total Credit Point/Total Credit)
Course 1	6	A	8	48	146/20 = 7.30
Course 2	6	C	5	30	
Course 3	4	B+	7	28	
Course 4	4	O	10	40	
Total	20			146	

17.3 CGPA is a measure of the overall cumulative performance of a student over all semester completed. The CGPA is the ratio of total credit points secured by a student in various courses in all the semesters completed and the sum of the credits of all courses in all the semesters completed. The CGPA will be calculated as per follows

$$CGPA = \frac{\sum [C_i \times SGPA(S_i)]}{\sum C_i}$$

Where SGPA (Si) is the SGPA of the i^{th} year and C_i is the total number of credits in the i^{th} semester

Calculation of CGPA:

Semester	Credits	SGPA	Credits× AGPA	CGPA
1	20	7.50	150.00	CGPA= Total(Credits× SGPA)/Total Credits CGPA= 1229.60/160 = 7.685≈7.69 (round off to second decimal point)
2	20	7.58	151.60	
3	20	7.32	146.40	
4	20	8.34	166.80	
5	20	7.58	151.60	
6	20	7.32	146.40	
7	20	8.34	166.80	
8	20	7.50	150.00	
Total	160		1229.60	

18. On completing all requirements for the award of the undergraduate certificate/diploma/degree, the CGPA will be calculated and this value will be indicated on the certificate /diploma/degree. The 3-years (6 semester) and 4-years (8 semester) undergraduate degrees should also indicate the Division obtained as per follows.

Division	Criterion
First division with distinction	The candidate has earned minimum number of credits for the award of the degree with CGPA of 8.00 or above
First division	The candidate has earned minimum number of credits required for the award of the degree with CGPA of 6.50 above but less than 8.0

Second division	The candidate has earned minimum number of credits required for the award of the degree with CGPA of 5.00 or above but less than 6.50
Pass	The candidate has earned minimum number of credits required for the award of the degree with CGPA of 4.00 or above but less than 5.00

The conversion of CGPA into percentage will be as follow to facilitate its application in other academic matters.

$$\text{Equivalent Percentage} = \text{CGPA} \times 10$$

The percentage will be rounded off up to the second decimal point

19. The student will be examined by the University as per the prevailing syllabus and scheme of examination.
20. The candidate shall be awarded a certificate/diploma/degree when he/she successfully earns the minimum required credits for the certificate/degree/diploma
21. A Grade Card shall be issued to all the students after every semester based on the grades earned. The course details (code, title, number of credits, grades secured) along with SGPA of every semester and CGPA earned till that Academic Year will be displayed in the grade card.

28. LAYOUT AND FORMAT

One of the most important requisites in preparation of the *Thesis* is consistency of format and adherence to the specific instructions given below.

Font

The Thesis should be written in English. It must be typewritten on A4 size paper (21 cm x 29.7 cm) in a clear and legible font (e.g., Times New Roman 12 or Arial 10). As far as possible, use the same font for the entire thesis but, if necessary, different fonts may be used within Tables, Figures, and Appendices. The Thesis has to be printed single-sided. Double-spacing should be used in the Abstract and text of the Thesis. Single spacing should be used in long Tables, block quotations separated from the text, footnotes, and bibliographical entries. Paragraphs should be indented, or an empty line left between paragraphs.

Larger size type may be used for the title of the Thesis and for Chapter headings, as long as it is not larger than 18 point. Boldface type may also be used on the title page and for headings, as well as in the text for special symbols or for emphasis. Reduced type may be used within Tables, Figures, and Appendices, but it should be at least 9 point in size (partly because of microfilming requirements) and must be completely legible.

The Thesis should be free from grammatical, lexical and punctuation errors. In addition to the computer spellchecker, a thesis should be proof-read to check that errors do not remain that are not detected by the spellchecker. The thesis should consistently use either American or British spelling but should not alternate between the two. When using numbers in the text, if the first word of a sentence is a number, it should be written in words. Writers not fluent in English are encouraged to have their manuscript professionally edited before submission, to improve the English.

Chapter and Page Layout

Begin each Chapter on a new page. Do the same with each element of the front matter (list of Tables, Acknowledgments, etc.), the Reference section, and each Appendix. Avoid typing a heading near the bottom of a page unless there is room for at least two lines of text following the

heading. The Chapters should begin on a new page, but sections and subsections should not. A "display" page (a page that shows only the Chapter title) can be placed at the beginning of Chapters or Appendices. Pages should be numbered at the bottom in the centre, using Arabic numerals (1, 2, 3) beginning with 1 on the first page of the Introduction and continuing consecutively to the end of the manuscript including References. The preliminary pages are numbered in lower-case Roman numerals, beginning with the declaration page.

Margins

A margin of at least 4.0 cm must be left at the top and left side of each page and a margin of at least 2.5 cm on the right and bottom. The last letter or character in the longest line on the page determines the margin.

Captions and numbering (Tables and Figures)

Each Table should carry a number and a title clearly describing the data presented. Similarly each Figure / Illustration should carry a number and caption that clearly describes the nature of data presented. The caption should be at the bottom of the Figure. Number them consecutively throughout, in the order in which they are placed in the text. The Figures, Graphs, Tables should be embedded in the text of the thesis, immediately after the first mention of it in the text, on the same page if there is room, or on the following page.

Captions and titles of Figures and Tables should appear on the same page as the material itself. Tables should be numbered consecutively with Arabic numerals throughout the thesis. Figures and Illustrations should also be numbered consecutively in the order of presentation. All Tables and Figures must be referred to in the text by numbers and not by a phrase such as "the following table".

Tables or Figures of peripheral importance to the text may be placed in an Appendix.

Appropriate use of headings and subheadings

Headings should be distinguished from the surrounding text by a larger font size, a different font, bolding, italics, or a combination of these. All headings of the same level should use the same style, and headings at lower levels should be less prominent than those at higher levels.

Example:

Chapter Title (Arial 14 point/ Times New Roman 16 point -Bold Small caps) Heading for section (Arial 12 point/ Times New Roman 14 point - Bold Italic) Heading for sub-section (Arial 10 point /Times New Roman 12 point - Bold) Heading for part of subsection- (Arial 10 point/ Times New Roman 12 point- Bold Italic). All headings should be left aligned, except chapter headings, which may be centered. The headings and subheadings can be numbered, if necessary.

29. FORMAT OF THESIS

The manuscript consists of three main parts: The Preliminaries, The Text, and The Annexure. It is to be arranged in the following sequence:

SYNOPSIS

The synopsis is a summary of the contents of the thesis. The synopsis is submitted prior to the submission of the thesis and will carry a cover page (format given in Appendix-VIII) It should be concise, and comprehensive, and should have the following details: The background and objectives, hypothesis, methods, major findings and significance/ implication of the findings

The results can include quantitative data. Citations are generally not included in the synopsis. The synopsis should not include internal headings, diagrams or other illustrations. Like the text, it must be double-spaced.

The length of the Synopsis should not exceed 6 pages.

In the Thesis, the synopsis should be placed before the main text and when it forms part of the thesis, it should carry the heading 'SYNOPSIS.'

THE TEXT OF THE THESIS

The text of the thesis is usually divided into chapters with subheadings within the chapters to indicate the orderly progression of topics and their relation to each other. All chapter headings should be typed consistently. When there are subheadings, each level of heading should be clearly distinguished typographically from the other levels, and the variations should be selected so as to reflect in an obvious way the hierarchy of headings (that is, higher level headings should look more important). Always allow at least one extra line of space above subheadings, and preferably below as well.

INTRODUCTION: The thesis should normally begin with a general introduction presenting an overview of the purpose and significance of the study. The introduction should show why the topic selected is worth investigating. This will normally be done with reference to existing research, identifying areas that have not been explored, need to be explored further, or where new research findings justify a reconsideration of established knowledge. Having precisely defined the research problem, the introduction should propose a solution to this problem. This response should make explicit the objective of the research, not simply state an intention to explore or discuss. The study should be based on a well-defined hypothesis, which should be clearly stated. How the research makes an original contribution to the theoretical body of knowledge and also the study's practical significance should be mentioned. It is especially critical that the Introduction is well written. Without a clearly defined purpose and strong theoretical grounding, the thesis or dissertation is fundamentally flawed from the outset.

The final section of the Introduction should provide a brief overview of each of the main chapters that the reader will encounter.

LITERATURE REVIEW: It is called the Literature Review because the contents of this chapter are based on published material. The purpose of the literature review is to summarize, evaluate and compare the main developments and current debates in the field, which are specifically relevant to the subject of research embodied in the thesis. Literature review should also aim at and ways to address these issues with the present research program.

A critical review of the available solutions to the problem that was addressed and identifying the knowledge gaps in the current literature would establish benchmarks against which the contributions of the study can be assessed. Therefore, the most recent information relating to the field of study has to be presented.

DESIGN OF STUDY: The following information is meant to serve as a general suggestion and not as a rigid prescription. The supervisor and the student may decide how this part of the dissertation should be structured. Although this section varies depending on method and analysis technique chosen, the chapter describes and justifies the methods chosen for the study and why this method was the most appropriate.

Following description of the research design, provide a detailed description of the procedure followed. Citations in this section should be limited to data sources and references of where to find more complete descriptions of procedure.

Description of the statistical analysis and tests performed are also to be given

RESULTS: The results are actual statements of observations, including statistics, tables and graphs. Mention negative results as well as positive. Use S.I. units throughout the thesis. Break up results into logical segments by using subheadings. Key results should be stated in clear sentences. Do not repeat in the text all the values given in tables. Do not present the same data as graph as well as table. Use one of the appropriate styles of presentation.

DISCUSSION: The purpose of this chapter is not just to reiterate the findings, but discuss the observations in relation to the theoretical body of knowledge on the topic. This chapter should also address the implication of the findings. Interpret results in terms of the background laid out in the introduction. Include the evidence or line of reasoning supporting each interpretation Break up the section into logical segments by using subheads, outline the limitations of the study, and propose areas for future research.

SUMMARY AND CONCLUSION: Start with a few sentences that summarize the most important results and conclude by giving the strongest and most important statement that highlights the outcome of the study. The conclusion should provide answers or solutions to the questions or problems raised in the introduction. The argumentation of the thesis should be summarized

briefly, and if appropriate, elaborate on how the research findings and results will contribute to the field in general and what sort of broader implications these may have. Suggestions may be made for further research where appropriate, but this is not a requirement

LIST OF REFERENCES: All publications cited in the thesis should be presented in a list of references following the text. Students are advised to restrict the total number of references to 200.

The student is responsible for the accuracy of the References. References should follow the *Harvard-like format*. Citation of References in the text should be given by author's last name (no initials) followed by the year. When two or more citations are given, list them in chronological order. When there are two authors, include both names, separated by "&"; when there are three or more names, give only the first author followed by "et al." If there are two or more papers by the same author(s) in the same year, identify them by "a", "b", etc. (and be sure to include the identifying letters in the Reference List). All References cited in the text (including those included in figure legends and tables) should be listed in References.

Start the References on a separate page, and arrange citations in alphabetical order by the first author's last name; do not number the citations. List *all* the authors (do not use "et al." in the reference list). When there are two or more references to the same author(s), list them in chronological order.

For journal references, the names of authors (last name and initials) should be followed by the date (in parentheses), title of the article, journal name (in italics-use PubMed abbreviations), volume number (followed by a colon) and pages (first - last page numbers). Reference to electronic material should include author name(s), date, article title, and journal (as above); where volume and/or page numbers are not available, substitute Digital Object Identifier (DOI) number. Illustrative examples of entries in a Bibliography or list of References are given below:
